How do I enable the Pro dialer?

Elyse - 2019-04-15 - Comment (1) - Dialer Codes

Pro users who are not rooted can activate the not copy/paste dialer by going to System Settings, Accessibility (near the bottom), Signal Spy, Turn On Service. This will allow Signal Spy to copy and paste the dialer codes automatically when you click on them!

I did this and still *88 is the only thing that passes in. Nothing works, not even emailing them for help.....
